CT Project Explanation in Interview

How to put Project in your resume

Try to write below in your own words, and experiment with ChatGPT.

Java Developer Trainee | HulkHire Tech, Hyderabad (Feb26 – Till date)

Project: Stripe Payment Integration:

Contributed to building a secure and scalable **Stripe Payment Integration System** using **Java Spring Boot** in a **microservices** architecture on **AWS**. Participated in implementing **Stripe PSP REST API integration**, **notification handling**, **validation framework, business rules, HmacSHA256 & Basic Auth security enhancements**, and **error management**. Explored and integrated **Redis Cache** and **Spring Security**. Followed RESTful standards, applied design patterns, and strengthened debugging and problem-solving skills.

Responsibilities:

- Implemented **Stripe integration** using Java Spring Boot & Microservices, building modular stripe-provider & payment-validation microservices.
- Analyzed Stripe integration documentation and collaborated with the team to finalize the **end-to-end integration approach**.
- Developed the stripe-provider service **integrating with Rest APIs** (Create Session, Retrieve Session, Expire Session).

- Built a **modular validation framework** - with flexible design to add & maintain validation rules. Did **Redis Caching** of business rule params.
- Secured APIs using **HmacSHA256 with Spring Security** for request authentication and prevention against data tampering. Also integrated with Stripe Basic Auth.
- Developed custom error codes and applied Spring exception handling for robust **error management**.
- Processed incoming **Stripe notification** events and performed unit testing.
- Worked with **MySQL** (Spring JDBC) and gained hands-on experience with **AWS services** (EC2, RDS, Secrets Manager).
- Applied design patterns (Factory, Builder) and OOP principles to build modular, maintainable services.
- Awarded **STAR Performer of the Month** for timely delivery, demos, and team collaboration.

Technology Stack Offered

- Programming Languages: Java
- Frameworks: Spring Boot, Spring Boot JDBC, Spring Security
- Microservices, Circuit Breaker, Eureka Service Registry
- AI-Augmented Development: GitHub Copilot, Claude, ChatGPT, AI-assisted coding, automated test generation, API Documentation
- RESTful APIs: JSON, CURL, Postman, SwaggerUI
- Databases: MySQL (RDS)
- Version Control Systems: Git, BitBucket, SourceTree
- Build Tools: Maven
- Application Server: Tomcat
- Testing Frameworks: Unit Testing(JUnit), Mocking(Mockito), Code Coverage
- Cloud Platforms: AWS: EC2, RDS, SecretManager
- Cache: Redis
- IDEs: Eclipse, DBEaver
- Agile Methodologies: Scrum, Agile Development
- Project management tool: Jira

- Logging, Debugging & Troubleshooting: Eclipse, Slf4J with Logback
- Performance Tuning | Design Patterns | Code Review | Data Structures | Algorithms
- Other tools: Jackson, Lombok, Sonar Qube, Mobaxterm

How to explain the project in an Interview:

- Tell something about your project
    - We are doing a stripe payment integration. Stripe is a popular PSP in Europe & US. We developed using Java Spring Boot & microservices. I worked as part of core stripe-provider & payment-validation services. ***[EMOTIONS]***
    - It was really great working on this project. I got so many learnings & I involved all throughout design and development ***[EMOTIONS]***
        - — including
        - *And say all key things which you wrote in Project Description*. Add emotions
    - **I am so excited to be in IT, and right at the beginning I got a great learning. And I am really looking forward to join you, and give my best in your org.**
- You need to be strongly prepared on each of the below, both theory, and code wise wherever applicable:
    - Basic Payment Domain Knowledge
    - Strongly Functional Preparation of end-to-end Stripe flow.

    - Entire architecture (Microservice) and relating it practically to our project.
    - Working process & tool knowledge
    - Other Project description items.
- Goal: **I will explain to the interviewer 80% of all these topics.**
- **How to prepare**
    - For each item in the project description, write down 5-10 points, what will you explain - concept & code.
    - Relate how 1 topic relates to another. Connect multiple topics together in your answers. Each topic should go to 2 other topics
    - While answering, focus on emphasizing more on those relating topics.

Other points to consider while you are in the interview:

- Enthusiasm and Passion
- Problem-Solving
- Communication Skills
    - Speaking - clear understanding to & fro
    - Day to day working - coordination - clarity of thinking - converting to others.
- Adaptability and Learning
- Cultural Fit (growth of team & growing together)
- Positive Leadership and Initiative
- Portfolio or Code Samples (GitHub, technical posting LinkedIn)

- References - Promote
- Your entire experience throughout the interview - maintain yourself professionally.
- **Questions for the Interviewer**
    - Ask what major domains you guys are working. What primary technologies are you guys using?
    - Appreciate the company.
    - Before joining here, i was doing research on internet about your org.. And its was really impressive (find something). *I am extremely happy to be here with you guys.. And looking forward to join you guys.. And add a lot value. Great to meet you. You asked very good questions*.. **[EMOTIONS]**
- Follow-Up: 3-5times
    - If not select, again followup, give me feedback.
